

THE CALL

VOLUME XXXI NO. 30

GLEICHEN, ALBERTA, WEDNESDAY

OCTOBER 12, 1938

SUBSCRIPTION \$2.00 PER YEAR

BOW VALLEY TRACK MEET HELD FRIDAY AT OLD SUN SCHOOL

Originally scheduled for Wednesday October 6th, the central Bow Valley Track Meet was held on Friday last. The postponement had been made necessary on account of the condition of the route, but with the improvement consequent upon the drying days following the storm it was considered best to carry out the previous arrangements because the race track and jumping pits had all been prepared by the principal and staff of the Old Sun School. An added reason being that several of the schools across the river, had been training quite hard for this event.

The morning broke cool and fine and the ground was in excellent condition, except for the storm leaving it a little slow. In spite of this the time made in the various races were quite fast, one feature of these being the surprising speed of several of the boys in the intermediate classes. The schools represented were Gleichen, Old Sun Indian School, Alton, Arrowwood and M.L. Queen's. Unfortunately being unable to be present owing to the condition of the track. These schools were crowded with over six hundred pupils. The first three in each class compete at the Bow Valley Meet to be held next time next May in Strathcona. Last year several of the winners at the large meet held in Gleichen in May won the Provincial title in their event and did themselves credit.

The contests were timed to start at ten in the morning but it was found that the mile had got difficult in travelling through the mud the start was delayed until shortly after 11 a.m. After this all events were run on an schedule and the last two half mile races were finished shortly before five o'clock. These were extremely exciting events. Evans of Gleichen, unfortunately being pocketed between two runners, while in the next race Warner, also of Gleichen took the win at this and despite to the lead from the start held that position to win a handy race at a pun which pace, one that reflected credit on all competitors.

As the list of winners has not been compiled and classified at the time of going to press "The Call" will publish it this week, but expects to give its readers a full list of winners next week.

Grain Club Will Demonstrate

The Gleichen Junior Grain Club will hold its Achievement Day consisting of seed fair and public meeting in the dining room of the local Community Hall, on Tuesday 18th October.

The program will start at one o'clock and will consist of demonstration in selecting and judging grains, judging competition and a public meeting for distribution of prizes and general discussion of seed improvement.

Field men from the Department of Agriculture and a representative from the Alberta Wheat Pool will be present and take part in the meeting. A cordial invitation is extended to those interested to attend.

With the exception of where hail damage was suffered the members of the club have had a successful year and as a result there will be a large amount of first class seed for distribution in this district for 1939.

FARM WOMEN HOLD REGULAR MEETING

Mrs. W. McKeever was hostess to the ladies of the U.F.W.A. at their regular meeting held last Thursday. Mrs. A. Wilson, acting president, opened the meeting as Mrs. Buckley was unable to be present. The opening song was "When You and I Were Young Maggie" and the roll call was answered by "What I Should be Thankful For." Correspondence was then read.

It was decided to get started on the quilt. The wool is to be carded at the next meeting and men quilted later. Mrs. McKeever will be in charge and will order the material, etc.

Mrs. Quinnell, convener of the program committee, will not hold the program meeting till after the regular meeting Mrs. Sammons read a paper on "No. 10 Darning 25" which proved to be very interesting. She also read the bulletin on Health. The meeting then adjourned and a delicious lunch was served by the hostess. The members will hold their next meeting at the home of Mrs. B. Stet.

THE WORLD OF WHEAT

By H. G. L. Strange, Director of "Crop Testing Plant"

"These registered and certified seed growers seem to ask a pretty high premium for their seed. Isn't there some way to get it cheaper?" — a friend asked me last week.

"The seed is well worth the price asked," I told him. "It takes a lot of extra expense and care to grow registered and certified seed, but," I said, "if you don't want to pay the seed grower for doing the extra work, why not do it yourself and so save money?"

"How?" he asked.

"Lay down a seed bed on your farm," I advised. "Choose five or ten acres of your best summerfallow, then buy a few bushels of the best registered or certified seed, and sow it on this small field, leaving an alley way all around it. Protect the field from fire, harvest, thresh and sell the grain with care, and then by next year you will have enough seed for a large acreage."

"Oh," answered my friend, "that's a lot of trouble though, isn't it?"

"No," I ventured to say, "that's the easy part, either we must go to extra trouble ourselves to produce an extra good thing, or pay some one else to do it for us."

Following factors have tended to raise prices: Seeding in Russia behind a year ago. No further permits for South Africa corn exports. Expected unusually small Italian corn crop. War risk insurance rates reduced. Threshing in Poland not yet started. Increased complaints of deterioration in Australia. Food grains in northwest India deteriorating owing to continued dryness.

Following factors have tended to lower prices: Roumania endeavoring to export an enormous amount of wheat. Rains bring relief in Argentina. Official reports state conditions satisfactory. Food research institute estimates 1938 world wheat yield may

be the greatest in history. Crop planting becomes active in Argentina. War possibilities fade and wheat offerings increase.

RAISING STANDARD OF GENERAL HEALTH

In raising the general standard of health, diet was far more important than housing, Sir Edward Mellanby, eminent British nutritionist told a gathering in Ottawa. "For be it from me to discourage good housing measures, but diet is of first importance from a health standpoint," said Sir Edward, secretary-general of the British Medical Research Council of Great Britain and chairman of the League of Nations Committee on Nutrition, who is addressing Ontario audiences under the auspices of the Canadian Medical Association.

In support of his contention that proper food was more important than good housing, Sir Edward stated that the infant mortality in the island of Malta in the Heracles, where homes were on the lowest possible scale, was only 40 per thousand. At the same time the death rate among infants in the rest of England was 130 per thousand.

"It would be hard to find worse housing conditions than on this island. There are no windows and no chimneys. Smoke exhaled through the only door. Cows, pigs and chickens all lived in the same room with the family. But the babies were breast-fed and the children and adults ate the natural food from the cow, the hen, and fish from the sea," he said.

"When an investigation was made there was no death rate from the disease among the children and all had straight legs. When our investigator went back last year, he found things had gone badly indeed. When people lived near to a shop where our so-called 'civilized' high energy-bearing foods were easy to obtain, their general nutrition was poorer. When they lived far away and had to be delivered to them, their health was greatly improved."

Developing the theme, Sir Edward asserted that on the island of Tristan da Cunha, in the South Seas, there was no tooth decay and no woman had ever died in childbirth. They live on potatoes, not white wheat flour," he commented. Proper feeding would lead to the physique and strength, mental and physical, of the good citizen, Sir Edward was confident.

"There is a great amount of stunted growth in all countries—stunted mentally and physically. The poorer the person, the more likely he is to be stunted," observed the British scientist. Of 58,000 world-recruits for the British army examined between 1930 and 1935, 40 per cent (23,000) were rejected due to bad teeth, bad bones, flat feet, and heart disease. This was indicative of the health level of Britain's poorer classes, he said, as all these ailments were more common among the poor.

By the time English children were old enough to go to school, they were the British army examined. Of 120,000 children attending London county council schools, 70 per cent were found to have decayed teeth. Others had bad tonsils, anaemia, and

SHORT COURSE TRAINING PROGRAM FOR FARM YOUTH

Again this winter a youth training program will be staged in various parts of Alberta. It might be well for Gleichen to have the school open here since we have plenty of unemployed youths also empty buildings in which to conduct the schools. Here is an outline of what the short course school teaches:

Under the direction of the Department of Extension of the University of Alberta, in co-operation with the Provincial Department of Agriculture, it is proposed to offer in the winter of 1938-39 between 35 and 40 short course schools in practical agriculture, household science, handicrafts, recreational training and community leadership. These courses of two and three weeks' duration are free to all rural young men and women between 15 and 30 years of age who are either unemployed or not gainfully employed. This classification includes all young men and women who are living on the farm and not on the receipt of wages.

The course of instruction will be organized with the object of improving morale and developing a new sense of citizenship by giving the students a proper sense of the dignity and importance of the profession of agriculture as a whole. The courses for men will cover the subjects of soils, field crops, animal husbandry, dairying, farm management, farm management, poultry, horticulture, entomology, marketing, practical handicrafts, recreational training and community leadership.

Evening classes will be of a non-vocational nature and will include dramatics, discussions of literary, economic and social problems, films and recreation. Full use will be made of valuable illustrative material such as lantern slides, films and radio, and a determined attempt will be made to relate all lecture material to the problems of every day life in such a way as to show the student that his occupation and way of life is intimately related to the welfare of society as a whole.

The schools will be organized as a co-operative community venture between the university, the government and the communities themselves. In other words, they are to be real community schools. School centres will be chosen with the object of serving young people from the surrounding country within a radius of 20 to 30 miles. Students will live within four or five miles of a centre may live at home and come in each day. Those living at greater distances away may live in the school dormitories or stay with friends.

In order to keep the cost of this training to a minimum local organizations such as town councils, boards of trade, church and the other community organizations will be asked to provide, if possible, buildings suitable for class rooms, dining halls and dormitories. Last year it was found that churches, community halls, schools and vacant stores or other buildings could be utilized readily.

Students are expected to maintain themselves if they can. Last year it was found that the average cost for food in a two weeks' school was about \$7 per person, and the student was given the option of paying this amount in cash or contributing an equivalent amount in goods such as meat, vegetables, fruit, butter, milk, eggs, chicken, etc.

These necessitous students who cannot contribute either goods or cash can be taken care of by a special provision which permits an allowance from the Youth Training Fund of up to 50c per day for room and board. Every student is expected to make whatever contribution he can.

The community kitchen will be under the direction of a trained dietitian who is a member of the staff.

"This is a damage that can never be remedied. You can think about it later but you can never quite get them back to normal," he warned. The wealthy also had their own diseases, said Sir Edward. "If it is any comfort to the poor, the well-to-do have a higher death rate from diabetes and appendicitis," he added.

OBITUARY

MRS. J. B. BEAUDIN

Mrs. J. B. Beaudin died suddenly at her home, six miles north of Cluny, last Thursday evening from the effects of a heart ailment. Deceased had been about the house during the day doing the usual house work when about ten o'clock in the evening she suddenly collapsed and died. At the request of her children, by her first marriage, who live in Calgary an inquest will be held under the direction of Coroner Fargher on Friday afternoon the jury viewed the remains after which Dr. Letanance of Arrowwood performed the autopsy. The stomach and contents were sent to Edmonton for analysis. The inquest was adjourned for a week pending a report from Edmonton.

Mrs. Beaudin is survived by her husband, J. B. Beaudin, and seven children, six by her first husband namely: Rene, George, Margot, Paquette of Calgary; Roland and Eugene of Longview, B.C.; and Claudia of Sundre; and Florine Beaudin, age 3 years. Mrs. Beaudin was born in Chelmsford, Ontario, in 1891, and had been a resident in Alberta for about 18 years, going to the Cluny district about some five years ago.

Funeral service was held at the Cluny mission Monday morning at 10 o'clock by Frs. Lavigne and Gagnon after which interment was made in the Gleichen Catholic cemetery. Deceased's five sons and her nephew Grand Beaudin were pallbearers. Funeral arrangements were in charge of G. W. Evans.

The Big Four

When one considers that a few simple and inexpensive precautions could prevent a great deal of it, it seems incredible that the annual property loss by fire in the three prairie provinces, despite a general downward curve in the past six years, still hovers around the million dollar mark in each of these provinces.

During the period, 1935 to 1937 inclusive, the annual toll paid to the fire demes in Saskatchewan and Alberta has averaged over a million dollars each with the Alberta figure jumping to a million and a half in 1937. In the same period Manitoba's annual tribute to flames has averaged around \$800,000.

Expressed in per capita figures—for that is the true test of the comparative cost of carelessness where fire is concerned—the loss in 1937 ranged from \$1.80 per head of population in Alberta to \$1.12 in Saskatchewan.

While it is a matter of congratulation that these losses are materially less in each of the provinces than in 1931 and 1932, roughly reduced by fifty per cent., the losses are still greater than they need be. There are a few simple protective measures which are available to every person at very little expenditure of either time or money were adopted, and if people would not forget that danger is ever present where fire in any form is used.

Results Of Forgetfulness

Too much stress cannot be laid on the injunction to remember at all times that where there is fire there is risk, for there are few who have reached the age of discretion who are not aware of the dangers and the measures that should be adopted at all times to minimize them. Disaster is not usually the result of lack of knowledge but of forgetfulness.

That is the reason for the value of fire prevention work. Coming as it does at the season of the year when preparations are being made to maintain warmth for the winter months, it serves as a reminder of the necessity of taking precautions to prevent disaster and loss at a time when danger is accentuated, or rather, when additional risks loom on the horizon.

Analysis of statistics and information in the possession of superintendent and commissioners of insurance show that in the three prairie provinces the bulk of the fire loss is comprised of small buildings and their contents. In 1937 there were comparatively few large conflagrations except in Alberta where large buildings and contents to the value of over half a million dollars at half a dozen points went up in smoke. It also demonstrates that the greatest percentage of loss is in small villages and in the rural districts.

This is not surprising when it is remembered that the cities and larger towns are equipped with efficient fire fighting forces and apparatus, water-works and fire alarm systems and a convenient telephone system which protect the urban residents from the consequences of their carelessness. Were it not for these facilities the losses in the urban centres would be appalling.

The information in the possession of these officials also demonstrates that on the prairies the fire demes have four very active disciplines—the big four, who serve his cause faithfully. They are (1) Cigarettes and careless smokers; (2) Defective chimneys; (3) Overheated stoves and stove pipes; and (4) Gasoline and other inflammable liquids.

The evidence further supports the contention of government officials that the bulk of the loss is sustained first by dwellings and their contents and secondly by barns and other farm buildings exclusive of residences.

Much Is Avoidable

These facts and figures demonstrate very clearly that a very large percentage of this loss could be avoided were it not for lack of thought or lapse of memory.

The information suggests to anyone who cares to give the subject a moment's thought the vital necessity of periodic and careful inspection of all heating apparatus in the home, of the importance of seeing to it that stove pipes and chimneys are cleaned and kept clean and that if a stove is too close to framework for safety to move it out.

The facts and experience demonstrate that natural grass and weeds growing up near a house or other building should be cut, raked up and removed and that hot ashes should not be placed where wind may carry sparks to ignite a combustible structure.

Experience also shows the wisdom, where stubble is to be burned, of sticking to the law which requires that fireguards of 20 feet or more be placed around the field to be burned and that three men be on hand to prevent the flames from getting beyond control.

If these and other precautions with respect to the use of gasoline, coal oil and ignited smoking materials were strictly observed at all times, the fire losses in the prairie provinces would be reduced to almost negligible figure, to say nothing of the lives that would be saved and the injuries that would be avoided.

More Doctors Than Lawyers

Canada Has One Physician For Every 1,000 Persons Living

The last census showed over 8,000 persons occupied as lawyers in Canada, and 544 justices and magistrates, not all of whom were necessarily graduates of law schools, but most of whom are likely to be placed as such. There is thus one lawyer for every 1,200 of the population and as there is one doctor for every 1,000, it would seem to appear that that body like take more looking after their health than keep up within the rules by which society governs its actions—Kitchener Record.

A skating rink has been carved inside an Alpine glacier, near the top of the Jungfrau.

Successful vaccinations against disease have been performed on ailments. It is said.

Alfalfa In Surgery

Can Be Used For The Purpose Of

Every 1,000 Persons Living

Alfalfa hay has become an important item in modern surgery, according to Dr. G. G. Moore, professor of agronomy at the University of British Columbia.

"Alfalfa yields a certain product useful in surgery," Dr. Moore said in an address at a farmers' field meeting. "This product is applied for the staunching of blood. It bodily like take more looking after their health than keep up within the rules by which society governs its actions—Kitchener Record.

It is a common fallacy that all spring water is pure, and good to drink. Its purity depends upon the ground through which it seeps.

In Siberia, natives build their granaries on stilts so that tremors of snow or winter will not cover them.

Glad To Be Back

Italian, Non Canadian Citizen, Likes Freedom Of London.

Joseph Petosco, a resident of Stratford, Ont., has returned to that city after spending three months with his parents and other relatives in Italy. Before coming to Canada several years ago, Mr. Petosco served time in the Italian army. Now he is a naturalized Canadian citizen.

When he arrived in Stratford, he found the Petroschis, his father-in-law, the Petroschis, his mother-in-law, and the Petroschis, his sister-in-law, all of whom he had not met for many years.

Mr. Petosco talked with a reporter, going back to his old home had not made Mr. Petosco think he had made a mistake in coming to this country and in taking out his naturalization papers here. He found the people in Italy were heavily taxed; his own phrase was "to be limited," and he was certain they enjoyed no such measure of freedom as we have here. They cannot come and go and leave their country as Canadians can. Mr. Petosco says it is not right to state people in Italy are all working and happy. Many of them are out of work and many more who are working are not receiving enough to meet the cost of living, which is very high.

The Stratford man says a loaf of bread such as we buy in this country would cost at least forty cents in Italy, and what we refer to as baby beef would be nearly one dollar a pound. The people in his native land are making sacrifices for their country, and it is a process which does not end. When one sacrifice has been made then there is a demand for another. The chief difference between Canada and Italy according to Mr. Petosco is that here one can attend to his own affairs, mind his own business and be left alone. That is what he considers the "highest" and most desirable form of freedom, and it is something which he did not find in Italy. The man from Stratford was certain the people of Italy did not want any war, but the trouble is they have nothing to say about it.

Natives of Timbuktu built and eat hippopotamus steaks, with hides too thick left on.

Steel mills offer about five hundred products in 100,000 different shapes, sizes and finishes.

England has 20,000,000 fewer acres of farm land this year than in 1918.

Recruiting for Britain's Territorial Army is breaking post-war records.

South Africa will spend \$800,000, on its railways.

More Elevator Space

Alberta Pool Needs More Facilities At Vancouver.

The Alberta wheat pool is seeking to lease additional terminal elevator facilities at Vancouver. It was reported at the head office in Calgary.

It is possible the pool may take over the Vancouver harbor board's No. 2 elevator, which has a capacity of 1,600,000 bushels.

Negotiations are under way with federal authorities and should the lease be obtained, the additional facilities would increase the pool's storage capacity at the coast to 6,600,000 bushels.

The pool's terminal at Vancouver has a capacity of 5,500,000 bushels.

For the first time in three years the bulk of Alberta's wheat crop is being moved from the west to the Pacific terminals.

The westward movement is attributed in part to better board operations.

Pacific coast terminals have a total capacity of around 21,000,000 bushels.

Drop Foreign Names

But Italy's Night Clubs Anxious For Foreigners' Patronage

Restaurants, cafes and night-clubs in Italy no longer to bear names of foreign origin, according to a circular issued by the National Fascist Federation of Western Italy of Entertainment.

In future no restaurant may be called "Metropole," "Bau Sile," "Belvedere" or "Chez Vous," or have an Anglicized Italian name, lest it should recall the period of "artificial refinement" before the Fascist era.

Night-clubs, such as "Monte Carlo Night," "Bagdad" and "Hollywood," must henceforth be rechristened "Night," "Villa d'Este" for "Venice," as these names are considered more in keeping with the Italian spirit of today.

There is to be no slackening, however, in efforts to entertain foreigners and in the maintenance of a proportion of the staff must be able to address guests in their own languages.

Exports of fresh apples from Canada to Belgium in 1937 (10,000 cases) were approximately six times as large as in 1936.

Sand or gravel in the pizazzes of food is necessary for the grinding of biscuits, since no modern bird is equipped with teeth.

In some South Sea islands porpoise teeth are used for money.

For Soil Erosion

Extension Of Forestry To Control Flood Problems

Extension of forest land gives much better mastery of flood problems than other methods. C. G. Bates of the United States forest service, St. Paul, Minn., said in a paper on "Reforestation and Flood Control" before the American Association for the Advancement of Science.

The term "flood control" is rather loosely used to designate both prevention and protection, he said. Forestry's primary concern is with prevention. In the U.S. the opportunity for demonstrating the degree to which forest could retard and control water flow was never better.

Dr. Bates discussed principally the flood and farming problems of the great Mississippi Valley, where flood control, either by artificial reservoirs or better use of the natural reservoirs, is inextricably bound up with erosion control. Artificial reservoirs will have a short-lived value so long as sedimentation occurs to the present extent, he said.

"It can be shown that well-kept forest land has practically unlimited possibilities for absorbing rainfall and preventing run-off and erosion, and hence that the extension of forest land gives much better mastery of flood problems than any other proposal. The limits are economic, not physical, and hence the problem must be approached in thoroughly practical, non-sentimental manner."

Was Servant Of Public

Prince Arthur Of Connaught Will Not Soon Be Forgotten

Prince Arthur of Connaught was a notable example of a man born to high position, rich in all the material things of life, who yet deemed himself first and foremost the servant of the public, who ever set duties of State before personal indulgence, and who undertook with undaunted cheerfulness onerous as well as simple tasks. His slim figure with its slight limp, was welcome everywhere. He mingled with the humblest as well as with the mighty. He was ever ready with a quip or a word of sympathy—and acts of sympathy more concretely expressed. Both army and navy loved him for his himself alone. Though he had been out of the public eye for some years, owing to delicate health that pursued him all his days, yet he was not forgotten, and there will be made a poignant recollection and many a word of heartfelt regret at his passing—Montreal Star.

Some men are like caricatures on the neck of the porcupine.

Asks Help Of League

Dr. Wellington Koo Asks Million Chinese Have Been Killed

Dr. Wellington Koo, Chinese delegate to the League of Nations, told the League assembly that no less than 1,000,000 Chinese had been killed since the beginning of the war with Japan July 7, 1937.

Dr. Koo said 30,000,000 others had been wounded or made homeless. Since Jan. 1, 1938, he said, there have been 2,304 Japanese air raids on civilian populations of China. He said more than 10,000 Japanese soldiers now are operating on Chinese soil.

Dr. Koo said, asked the League to:

1. Apply Article XVII—which paves the way for mediation in disputes between League members and non-members and is, therefore, a stepping stone to application of military and economic punitive measures.

2. Apply the resolutions of previous League sessions, especially the resolutions by enforcing an embargo on arms, munitions, airplanes, oil, raw materials and cash against Japan and by giving financial and material aid to China.

3. Create new measures to deter Japan from using poison gas and halting bombardment of undefended towns and civilian populations.

Started As A Hobby

Now 75-Year-Old Man Earns Living

Celebrating his 75th year, J. R. Webster of St. Helens in West Vancouver Township, Ontario, believes himself to be a "depression-buster."

Born in Ashfield Township, he worked as a laborer as a young man and spent some of his early years on the famous Jostyn estate near Lucknow. Advancing in years when the famous depression came on, he decided to take up knitting as a hobby that might eventually help out financially.

His knitting was confined to socks and soon he began to get a demand for them. Men going up to work in the lumber and pulp camps and heavy in their praise for the "all-wool" products of his hands. The demand increased, and so for the past number of years he has been constantly busy simply "knitting socks."

Asked if he believes knitting to be a woman's job, he just laughs. "Of course it isn't. I like knitting, and whoever says it isn't interesting, let him try keeping threads from getting knotted."

Quite Used To It

Japan Has Average Of Four Slight Earthquakes Every Day

The typhoon which struck the Tokyo area and caused a heavy loss of life and property was nothing compared to the earthquake tidal wave and fire which virtually destroyed Tokyo on Sept. 1, 1923, states the Detroit Free Press.

The property loss from the 1923 disaster was estimated at \$2,500,000,000.

And the casualty list included 99,331 dead, 43,476 missing and presumed to be dead, and 103,723 injured.

Japan is a group of volcanic islands, with an average of four slight earthquakes a day and a very serious one every six or seven years. We may not like some aspects of their foreign policy, but we cannot help admiring the fortitude of the Japanese—some 70,000,000 of whom are crowded into an area, the tillable acreage of which is less than half that of California, and their ability to take the worst nature can hand them and come up smiling.

DAILY T.C.A. EXPRESS SERVICE UNDERWAY

Radio plane flying, put out equipment to right instant. Definite announcement relative to commencement of regular services has been made. Monday, September 19, marked the inauguration of air express service across the West. Under the schedule Winnipeg is less than eight hours travel from Vancouver. Transport of mail is to begin early in October, feeder lines linking with the main line route at Regina in Saskatchewan and Lethbridge in Alberta. The top photograph shows a Lockheed 14, of which Trans-Canada has 10, landing at Vancouver after a night flight across the Rockies. At lower left is the pilot's compartment with its vast array of instruments, most modern of safety devices and controls. At lower right, mail is being checked into the nose compartment of the plane. A Lockheed 14 cruises at 2200 ft. in some South Sea islands porpoise teeth are used for money.

For weeks the deep throbs of powerful motors has been heard nightly over mountains and plains of western Canada as pilots of Trans-Canada Air Lines have carried on extensive training schedules, perfected technique in radio beam flying, put out equipment to right instant. A Lockheed 14 cruises at 2200 ft. in some South Sea islands porpoise teeth are used for money.

For weeks the deep throbs of powerful motors has been heard nightly over mountains and plains of western Canada as pilots of Trans-Canada Air Lines have carried on extensive training schedules, perfected technique in radio beam flying, put out equipment to right instant. Definite announcement relative to commencement of regular services has been made. Monday, September 19, marked the inauguration of air express service across the West. Under the schedule Winnipeg is less than eight hours travel from Vancouver. Transport of mail is to begin early in October, feeder lines linking with the main line route at Regina in Saskatchewan and Lethbridge in Alberta. The top photograph shows a Lockheed 14, of which Trans-Canada has 10, landing at Vancouver after a night flight across the Rockies. At lower left is the pilot's compartment with its vast array of instruments, most modern of safety devices and controls. At lower right, mail is being checked into the nose compartment of the plane. A Lockheed 14 cruises at 2200 ft. in some South Sea islands porpoise teeth are used for money.

TEACHING THE YOUNG IDEA

Your boy may not have exhibited any particular signs of genius but if he is a normal youngster, he shows a healthy curiosity about things. He wants to know what is going on around him and what it means.

His teacher will tell you that his craving for knowledge is just as natural and healthy a sign as a good appetite. His brain gets as hungry for information as his body for food, and it is just as important that it should be satisfied.

Nothing you can give him will provide such a fund of interesting and varied information as a newspaper. A good newspaper is a potent stimulus to thought and development. It is the history of today, covering every field of human endeavor. You will find few teachers who do not read a newspaper. They know its value in keeping a mind alert and in tune with the times.

Give your family this important advantage. It means so much to young and inquiring minds.

... is your Community Neighbor and Partner.

You will find him qualified to provide satisfactory Grain Marketing Service.

Demp, Woods, Bobby Hiddell and Campbell Evans spent the weekend in Calgary visiting friends and relatives. They returned home Thanksgiving night. The boys would very much like to have stayed over for another day and attend the big dance given in the Pajamas Tuesday night which cost about five dollars a couple. Owing to the fact they had to be school Tuesday they were unable to take their lady friends to the big dance.

"Young Man—
I THINK YOU'VE GOT
SOMETHING THERE!"

● Grandma always was a keen shopper and quick to "snap up" a bargain ... but you'll recognize these BARGAIN OFFERS without her years of experience ... you save real money ... you get a well selection of magazines and a full year of our newspaper. That's what we call a "break" for you readers ... no wonder grandma says "YOU'VE GOT SOMETHING THERE!"

Mrs. G. Messenger of Calgary is at present visiting her mother Mrs. J. Koefod.

J. Gove of Turner Valley arrived in town Tuesday evening to spend a few days visiting friends.

R. S. Haskayne has taken over a butcher shop in Basano. His son Stan will take charge of the business.

Mr. John Koefod celebrated his 80th birthday on October 4th. Mr. Koefod says he feels as young as he did ten years ago.

After spending the past three weeks in town visiting friends Mrs. A. Henderson left Saturday en route to her home in Vancouver.

Mr. and Mrs. LeRoy Koefod have left for Seattle, Wash. They expect to visit California while away and will be gone most of the winter.

James Black, manager of the Bank of Commerce, has established a record for growing high squashes. Mr. Black raised eighteen of them each being about twice the size of ordinary ones.

John Cook has purchased the Hasketh's butcher shop in Arrowwood and will take it over on November first. Mr. Hasketh and family will move to Crossfield where they will live in future.

The country was full of hunters on Thanksgiving Day. From early morning until dark the reports of shot guns were to be heard everywhere. Very few ducks were to be seen flying in the evening in certain parts, consequently some hunters had very poor luck. A number of Calgary sports spent the day here.

The many friends of Mrs. D. Bond were sorry to learn of the death of her father, Mr. O. L. Taylor, who lived in Carmanville. Mr. Taylor's auto was struck by a train last Wednesday and he was injured so severely that death occurred on Friday. The funeral took place on Sunday.

Duggan and Bud Lester leave tomorrow for Trail, B.C. where they will play hockey with the Smokestoes. They will play hockey with the Smokestoes this winter. This winter Gleichen will have three players on the Trail team's lineup the other being Tommy Johnston. The Lester boys will certainly be missed on the Gunner lineup next winter as one or the other made a goal in every game played last season.

On Friday the Junior U.F.A. held a meeting at the home of Mrs. Buckley with fifteen members and one visitor present. The meeting was opened by singing two songs and the roll call was answered by "My Pet Supper-station." The Juniors decided to hold a Halloween dance on October 28th and have engaged Lloyd Hughtons' Trail Rangers orchestra for the occasion. This orchestra is heard frequently over C.J.C.J. After a delicious lunch, sponsored by the Yule Group, the hostess was thanked on behalf of the Juniors for the very enjoyable evening.

RAISING STANDARD OF GENERAL HEALTH

"It balances out"

Of all the protective foods, milk was by far the most important, declared Sir Edward. Rarely was there was rich in milk had greater stature, strength, physique and mental development. Among African tribes, consumption of milk meant the difference between a stalwart race of Maasai, and stunted, leek-headed "runts."

Tests in an English private school showed that addition of one pint of milk daily to the basic diet increased the strength and weight of the pupils. Their height increased in one year by one inch more than those not obtaining milk, while the gain in weight was almost double. The pupils played strenuously as never but they had fewer fractured bones. Incidence of rheumatism also decreased, the survey showed.

When children get adequate milk, they have fewer colds and their mental processes are brighter," he said.

The first vitamin to be discovered, Vitamin B₁, came to light when prisoners and hens on the island of Java, both of which were fed on polished rice, developed the same disease, disclosed Sir Edward. Since

the Great War, all the other discoveries regarding the health-protective features of natural foods had been made. It was not learned that rickets was due to lack of the sunshine vitamin, Vitamin D, until after.

Sir Edward Mellanby summed up the findings of nutritionists in the last 20 years with the message that all foods required for complete health

could be obtained by building the diet around dairy products such as milk, cheese, butter, and fresh cooked vegetables, fresh fruit, eggs, fish, liver and kidney, and meat.
